15a 12-9a										

PHD% (Blue Bar) It represents the quality and running ability of the horse.
    It is a unique factor, that is, it is not a weighted average of other factors.
    You can make a first selection considering the first four favorites of PHD% or
    consider values equal to or greater than 50%. Values above 70%, are highly ranked
    horses in relation to the current race.

HD% (Red Bar): It represents a powerful factor of 12 factors, namely: PHD%, P1-2-3,
    LIFE, L.Yr, AF, AA, mTq, Vel, Rem, Ua, Pa and SVR. The weight for HD% considers
    the first four favorites of the 12 factors mentioned above.
    Similar, to the PHD%, You can make a second selection considering the first four
    favorites of HD% or consider the values equal to or greater than 50%. Values above
    70%, are highly ranked horses in relation to the current race.

TIPS: With the selection of four favorites of PHD% and HD%, there are a high percentage
    of hits, that there is the winner. The final selection will depend on analyzing the
    individual factors mentioned above. Five factors, important in the final selection are
    LIFE, L.Yr, Ua, Pa, and SVR. It considers the 4L and 4B Factors, explained later.
    Those interested in the race train can use Vel and Rem, along with mTq and SVR (ISVR).
    In MC or MSW Races, It's recommend looking at LIFE and mTq.

For a quick selection overview, analyze the six best MaxF values, which are in the lower
    right corner of each race. Likewise, you can consider the selection of 4L, which
    represents the six best horses of the Factors: PHD%, HD%, SVR and MaxF

11-56	11-56	10-57	8-51	10-53	11-54	5-55	4-54	8-58	10-51	5-58
1-1A 3-3A	4-6a 5-2A	6-9a 7-			3-15	11-14	10-13	12-71	8-69	1-68
8a 8-7a	10-6a 11-7a	12-1A			8-11	5-10	7-7	3-64	11-64	5-62

4L: It means "the four legs (4L) of the Handicapper" since it considers the six best factor
    horses: PHD%, HD%, SVR and MaxF. The point system is: for the 1st Favorite, 6 points,
    for the 2nd favorite, 5 points and so on, for the 6th favorite, 1 point. In such a way
    that the maximum will be 24 points. For a quick selection of the possible winner,
    this factor could be used, since in the six favorites, there is a 90% success rate.

P1-2-3: Represents the quality of the horse, when considering the sum of first,
    second and third positions, depending on the total number of starts.
    The value of this factor is normalized, this means that it considers the average and the
    standard deviation of the race according to the individual P1-2-3 values of each horse.
    For values > 60%, it is recommended to analyze said horse.

LIFE: Represents the highest normalized Speed Rating of the horse in all its performance
    on the track.
    The value of this factor is normalized, this means that it considers the average and the
    standard deviation of the race according to the individual LIFE values of each horse.
    For values > 60%, it is recommended to analyze said horse.
This factor is extremely useful, as it generally reflects the Speed Rating value of each
    horse, including the horses that will run for the first time. The analysis of this factor is
    combined with the factors L.Yr, Ua and Pa, which will be explained later.
Imagine you have a horse that appears as 1st or 2nd favorite in LIFE, but does not
    appear in L.Yr, Ua and Pa. This should be interpreted, as the last performances are
    not good, or they are rushing to rehearsal, and then throw it to the winner.

L.Yr: Represents the highest normalized Speed Rating of the horse in the current year.
    The value of this factor is normalized, this means that it considers the average and the
    standard deviation of the race according to the individual L.Yr values of each horse.
    For values > 60%, it is recommended to analyze said horse.
This factor is extremely useful, as it generally reflects the Speed Rating value of each
    horse, including the horses that will run for the first time, for current year.
    The analysis of this factor is combined with the factors LIFE, Ua and Pa.
Imagine you have a horse that appears as 1st or 2nd favorite in L.Yr, but does not
    appear in LIFE, Ua and Pa. This should be interpreted as an improvement for the
    horse is expected.

Right column explanatory text

A.F .: Represents the Future Quality of the horse, by winning this race. The number of first + 1 (5 points), seconds (3 points) and third (1 point) will be considered, depending on the number of track starts.

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual A.F. values of each horse. For values > 60%, it is recommended to analyze said horse.

A.A .: Represents the Current Quality of the horse, without winning this race. The number of first (5 points), seconds (3 points) and third (1 point) will be considered, depending on the number of track starts.

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual A.A. values of each horse. For values > 60%, it is recommended to analyze said horse.

mTq: Represents the Workouts on the track. It is considered the best value of the last four Workouts. Very important factor, especially for Maidens.

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual mTq. values of each horse. For values > 60%, it is recommended to analyze said horse.

Vel: Represents the speed of each horse, in Normalized Speed Rating, which is decisive for short distances. However, we must observe whether it is the speed given by the winners or is the Rem column (auction).

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual Vel values of each horse. For values > 60%, it is recommended to analyze said horse.

Rem: Represents the final action of each horse, in Normalized Speed Rating, which is decisive for long distances. However, we must observe whether it is the auction (Rem) given by the winners or is the Vel column.

Attention: In general, the one shot is in the Vel or Rem column.

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual Rem values of each horse. For values > 60%, it is recommended to analyze said horse.

Ua: Represents, in value of Normalized Speed Rating, the last performance of the horse.

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual Ua values of each horse. For values > 60%, it is recommended to analyze said horse.

Pa: Represents, in value of Nortmalized Speed Rating, the penultimate performance of the horse.

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual Pa values of each horse. For values > 60%, it is recommended to analyze said horse.

SVR: Factor, in value of Normalized Speed Rating, considers the action of mTq & Vel & Rem Factors.

Those interested in the race train can use Vel and Rem, along with mTq and SVR. In MC or MSW Races, It's recommend looking at LIFE and mTq.

The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual SVR values of each horse.

MaxF: Represents the six best horses, according to the maximum value of 13 Factors, namely: PHD%, HD%, P1-2-3, LIFE, L.Yr, AF, AA, mTq, Vel, Rem, Ua, Pa & SVR.

This factor is in the lower right corner of each race. The value of this factor is normalized, this means that it considers the average and the standard deviation of the race according to the individual MaxF values of each horse.

4B: It means "the four Best (4B) of the Handicapper" since it considers the four best factor: LIFE, L.Yr, Ua & Pa. The point system is similar to 4L.

In this section indicates the number of each horse and the number of trips on the life.

RANKING HIPICO (1st, 2nd, 3rd Horse for each Factor) = PHD%, HD%, P1-2-3, LIFE, Last.Year, A.F. , A.A. , mTq, Vel, Rem, Ua, Pa, SVR, MaxF = 14 Factors

Explanatory notes (right column):

<= Number Race. Identification Track Race. ISVR: Order according to mTq, Vel, Rem & SVR Index. This Factor is calculated according to race train of each horse. This Factor is very useful.

RH: It represents the final selection in points (14 max) according the result in the number of times that the horse appears as 1st, 2nd or 3rd favorite of the fourteen factors of the brochure. Those Factors are: PHD%, HD%, P1-2-3, LIFE, L.Yr, AF, AA, mTq, Vel, Rem, Ua, Pa, SVR & MaxF.

Graphically, the points of the "Ranking Hipico" are indicated with an asterisk, which results in the number of times that the horse appears as 1st, 2nd or 3rd favorite of the fourteen factors of the brochure. The numbers indicate the number of first, second and third favorites, respectively.

It is recommended to analyze the total amount of 1st, 2nd and 3rd favorite of each horse, in relation to the other horses. Likewise, observe the pattern of asterisks and the proximity between them. In this way, It can determine model 1, model 2, model 3, model 4, and so on.

It represents the value of the PHD% Factor and its position in that factor.

It represents the value of the HD% Factor and its position in that factor.

It represents the value of the P1-2-3 Factor and its position in that factor.

It represents the value of the LIFE Factor and its position in that factor.

It represents the value of the L.Yr Factor and its position in that factor.

It represents the value of the A.F. Factor and its position in that factor.

It represents the value of the A.A. Factor and its position in that factor.

It represents the value of the mTq Factor and its position in that factor.

It represents the value of the Vel Factor and its position in that factor.

It represents the value of the Rem Factor and its position in that factor.

It represents the value of the Ua Factor and its position in that factor.

It represents the value of the Pa Factor and its position in that factor.

It represents the value of the SVR Factor and its position in that factor.

It represents the value of the MaxF Factor and its position in that factor.

GF: Factor that represents the number of horse and the average value according to the 14 Factors of each Horse.

RH: It represents in points (14 max) according the result in the number of times that the horse appears as 1st, 2nd or 3rd favorite of the fourteen factors of the brochure. Those Factors are: PHD%, HD%, P1-2-3, LIFE, L.Yr, AF, AA, mTq, Vel, Rem, Ua, Pa, SVR & MaxF.

This section of the brochure, titled "Factor HD's PICK," represents a selection of four favorites for the brochure's most outstanding factors. These factors are: PHD%, HD%, 4L, 4B, RH, ISVR, mTq and MaxF, which were explained previously. It's like, if it were 8 horse riders. "Fin:" indicates the result of the race.
